Configure Friedrich Device

This step will utilize the Friedrich devices discovered home WiFi networks to have you configure it. This will allow for your Friedrich device and this app to be associated.

1. Select your home WiFi network from the [Home WiFi for Device] combo box. This is what your Friedrich device will use for app control. Select the [Device Wifi Re-scan] button If you do not see your WiFi home network.

NOTE: Enter your network configuration manually if you do not see your WiFi after re-scan or you cannot see it due network configurations.

2. If you must enter your network configuration manually for whatever reasons, proceed to fill out the SSID and Security Protocol for your home network to use on device.

NOTE: These controls are only enabled if you were unable to select your device from step 1.

| SSID | |
|---------------------|---|
| * Field is required | |
| Security | |
| Unsecured | • |

3. Enter the selected home WiFi network password in the [WiFi Password for Device] password field. This will allow your Friedrich device to properly connect to your home WiFi network.

password and then press "Associate Device".

9. The next window will show connected success. Just press OK, and you will see the new unit in devices with the serial number of the device as its name that can be changed in the units Info Tab.

NOTE: Your Home

WiFi Password

4. With all the WiFi Credentials identified, select the [Associate Friedrich Device] button. If everything works properly, you will be able to control your Friedrich device from this app.

Association Results

Your Friedrich device was successfully associated. Please restart your application to begin enjoying your Friedrich device.

Screen Wi-Fi symbol will stop flashing and will •••••• show steady. **NOTE:** A GREEN symbol will appear under the "Status" details and the name of your Friedrich unit which will appear with a number. for example: (62601032R01184660025) 10. Last step when you see the serial number under "MY DEVICES" you can select the unit and verify if is working, press MODE to change the temperature.

NOTE: Sometimes it takes a few seconds for the command to register on the unit.
